

ESWAR KALI PRASAD VARMA MAVULATI

Cumming, GA | +1 (585) 309-5134 | emavulati@gmail.com | [Portfolio](#)

PROFESSIONAL SUMMARY

- Senior QA Analyst with 5+ years of experience testing healthcare payer platforms, specializing in functional, API, and SQL-based backend validation across 15+ services supporting claims and pricing workflows in HIPAA-regulated environments.
- Performed REST API validation using Postman and Bruno and backend data verification with complex SQL queries while coordinating regression testing in Azure DevOps and JIRA, reducing production defect leakage by 30%+.
- Supported Azure-to-AWS migration validation by reviewing 250+ regression executions and verifying cross-environment service readiness, contributing to 60-70% processing efficiency improvement post-release.
- Improved regression coverage using AI-assisted test-design workflows in VS Code while collaborating with developers and product owners in Agile sprints to strengthen release readiness across healthcare integrations.

TECHNICAL SKILLS

Quality Engineering: Functional Testing, Manual Testing, API Testing, Backend Data Validation Testing, Regression Testing, Integration Testing, System Testing, End-to-End Testing, Risk-Based Testing, Smoke Testing, Sanity Testing, User Acceptance Testing (UAT).

API Validation & Service Testing: REST API Testing, Postman, Bruno, JSON Validation, XML Validation, HTTP Protocol Testing, Authentication Flow Validation, Request/Response Schema Verification.

Data Layer & Database Verification: SQL Querying, Complex Data Validation, Data Integrity Testing, Relational Database Testing, MySQL, Oracle, SQL Server.

Defect Tracking & Test Governance: JIRA, Azure DevOps (ADO), Requirements Traceability Matrix (RTM), Test Case Design, Defect Lifecycle Management, Test Execution Tracking, Confluence Documentation.

Cloud Environments: Microsoft Azure, Amazon Web Services (AWS), Cloud Migration Validation Testing, Multi-Environment Testing Support.

Healthcare Systems: Healthcare Payer Platforms, Claims Processing Validation, Provider-Payer Workflow Testing, HIPAA Compliance Validation, PHI Data Handling Assurance, Healthcare EDI Exposure.

Automation Collaboration & AI-Assisted QA: Playwright Framework Support (C#), AI-Assisted Test Case Generation, AI-Augmented QA Workflows, Intelligent Test Authoring Support.

Engineering Collaboration: Git, GitHub, Visual Studio, VS Code.

Delivery Methodologies & Release Support: Agile Scrum, SDLC, STLC, Sprint Testing Support, Test Strategy Contribution, Release Validation Coordination.

PROFESSIONAL EXPERIENCE

Senior QA Analyst

Mar 2021 - Present

Zelis Healthcare | Atlanta, GA

- Validated payer-platform functional requirements by designing structured regression and integration test scenarios in JIRA and Azure DevOps, improving requirement traceability coverage across 15+ healthcare pricing and claims-processing services.
- Simulated REST endpoint workflows using Postman and Bruno to verify authentication logic, schema compliance, and response accuracy across multi-service integrations, reducing downstream production defect leakage by 32%.
- Reconciled provider and claims transformation logic through complex SQL-based backend validations, ensuring end-to-end data integrity across enterprise pricing optimization pipelines supporting payer operations.
- Coordinated regression execution during Azure-to-AWS migration testing by reviewing and validating 250+ automated test outcomes, contributing to a 60-70% improvement in platform processing efficiency post-release.
- Protected healthcare release outcomes by driving defect triage in JIRA with cross-functional teams, safeguarding ~\$5-6M in revenue and improving resolution turnaround by 28%.
- Ensured HIPAA-compliant validation of PHI-sensitive workflows across staging and production-bound environments, maintaining regulatory alignment across enterprise healthcare delivery pipelines.
- Verified cross-environment deployment consistency across Azure and AWS infrastructure layers by validating service connectivity and configuration readiness prior to release approvals supporting multi-service stability.
- Accelerated regression readiness by leveraging AI-assisted scenario generation with Claude in VS Code to expand API edge-case validation coverage across healthcare integration services without increasing manual effort.

QA Analyst

Dec 2020 - Feb 2021

Cloud Mellow | Houston, TX (Remote)

- Executed end-to-end functional validation across e-commerce checkout and payment workflows using Azure DevOps test repositories, reducing customer-reported checkout failures by approximately 22%.
- Verified REST service request and response payload accuracy using Postman across payment gateway integrations, improving transaction reliability across staging validation cycles.
- Examined cross-browser purchasing workflows to identify UI inconsistencies affecting order-completion success rates across production-bound release candidates.
- Tracked sprint-level defects within JIRA workflows while collaborating with developers to reproduce transaction-processing issues, improving resolution turnaround across release cycles.
- Reconciled backend order-processing datasets using SQL validation queries to confirm synchronization between application-layer workflows and relational persistence logic.
- Aligned acceptance-criteria coverage with functional test execution during Agile sprint ceremonies, improving release predictability across incremental delivery iterations.
- Strengthened regression repeatability by expanding reusable functional test libraries within Azure DevOps repositories supporting continuous validation cycles.
- Documented structured execution evidence and reproducible defect steps within Confluence knowledge repositories to support faster cross-team troubleshooting collaboration.

- Interpreted application requirements and converted acceptance criteria into structured functional validation scenarios supporting early sprint-level testing cycles and improving requirement clarity across QA activities.
- Constructed manual test cases aligned with UI workflow validation using Azure DevOps repositories, improving requirement coverage consistency across iterative delivery phases.
- Cross-validated transactional workflows using SQL queries to confirm backend persistence accuracy across relational database layers supporting reliable data validation.
- Parsed REST API responses through Postman-based validation activities to verify schema compliance across early integration testing environments.
- Collaborated with QA engineers and developers during JIRA-based defect triage sessions, improving clarity of issue reproduction across sprint validation cycles.
- Supported regression execution readiness by confirming acceptance-criteria alignment with structured functional coverage prior to release candidate approvals.

PROJECTS

Healthcare Pricing Engine Validation

- Optimized regression scenario coverage by generating AI-assisted edge-case test variations using Claude-integrated workflows in VS Code, strengthening pricing-rule validation accuracy across multi-service healthcare integration pipelines.
- Engineered structured API comparison checks using Postman collections to verify payer-provider rate calculation responses across staging environments, improving pricing-rule consistency before production promotion.
- Strengthened PHI-safe workflow validation by executing controlled SQL-based dataset sampling across claims-pricing transformations, improving confidence in downstream reimbursement calculation reliability.

Payment Gateway Transaction Workflow Validation

- Stabilized checkout transaction validation coverage by constructing reusable API request validation suites in Postman targeting payment authorization and settlement workflows across staging release cycles.
- Investigated UI-to-database synchronization gaps using SQL-backed transaction verification queries, improving alignment between frontend order confirmation states and backend persistence records.
- Expanded cross-browser execution reliability by designing structured workflow validation paths in Azure DevOps test repositories, increasing repeatability across regression cycles supporting payment feature updates.

Enterprise Application Integration Testing

- Mapped acceptance-criteria dependencies into traceable functional validation paths within Azure DevOps repositories, improving early-stage requirements coverage during sprint-level feature onboarding.
- Examined service-response structure integrity using Postman-based endpoint validation checks supporting early integration readiness across enterprise application modules.
- Organized defect reproduction evidence through structured JIRA documentation alignment with execution steps, improving developer-side troubleshooting efficiency during regression candidate evaluations.

EDUCATION

Master of Science

Rochester Institute of Technology | Rochester, NY

Bachelor of Technology

Anna University | Chennai, India

CERTIFICATIONS

- ICAgile Certified Professional - Agile Testing (ICP-TST) - **ICAgile**
- AI Academy Associate Program - **Zelis**
- Postman & API Testing - **Udemy**
- Selenium & Test Automation Foundations - **LinkedIn**
- Software Testing and Automation Specialization - **Coursera**
- Agile Development Specialization - **Coursera**

ACHIEVEMENTS

- Q2 2025 IMPACT Award - **Zelis Healthcare**
- Q2 2024 IMPACT Award - **Zelis Healthcare**
